# RESIDUAL ARCADIA

Inter BAU/ TU Berlin — Atelier Le Balto — CoRDA/ Epoka

**A new narrative for the future of the Durana Region cannot be developed from scratch, we have to start in media res—in the middle of things. Durana's reality, its fragmented urban growth has to be accepted.**

**The project Residual Arcadia is aiming at the strengthening of the landscape qualities in the region and the orchestration of urban growth in view of its ecological, social and economic opportunities.**

**Instead of being controlled by an overall masterplan, the Tirana-Durres corridor will rather gradually deploy its specific qualities if its fragmented texture will be embedded within the overall framework of the cultural landscape of the Durana Region.**

**The future narrative for Residual Arcadia is composed by two constitutional elements:**

**1**

**THE FIELD**

**2**

**THE PROMENADES**

## PROGRAMMATIC CLAIMS

# PERFORMATIVE PLANNING

Based on the two constitutional elements of the narrative for Residual Arcadia (the field, the promenades) the performance of diverse actors and agencies will be tested through proto-typical interventions aiming at the exploration of the potential opportunities for the future development of the Durana Region.

## CULTIVATING THE LANDSCAPE

The main quality of the Durana Region lies in its landscape features: the topography of the Tirana-Durres corridor, its land that has been cultivated by the Albanian people and that is marked by the abundant vegetation of the Mediterranean. Residual Arcadia develops the cultivated landscape of Durana further by paying particular attention to in-between and left-over spaces.

## CITIZEN PARTICIPATION

The future vision of Residual Arcadia is anchored in the concept of an archipelago of urban and rural fragments that are embedded in an overall green carped of arcadic landscape. Both, the green carped and the fragmented urbanized patches are to be developed according to negotiation processes and mutual agreements between various communes and stakeholders.

## COORDINATED DIVERSITY

Qualitative improvement of Residual Arcadia can only be achieved through coordinated orchestration and with the constructive will of the people. Programmatic diversification, consciousness for natural resources and a certain level of self-organization are crucial preconditions for a new type of living model situated between city and nature.

## PROGRAMMATIC CLAIMS

FIG 8-9. Duran's urbanized landscapes

## MAPPING THE FIELD

# 1 THE FIELD

FIG. 5. Figure-ground map versus green spaces

The Durana Region is marked by green spaces that are more and more consumed by urbanization processes resulting in a heterogeneous patchwork that is neither representing the city nor the country side or pristine nature. The project accepts the hybrid nature of urban sprawl but considers the landscape as the framework that holds the divers patches together.

## MAPPING THE FIELD

FIG 10-14. Programmatic maps showing land-use, zoning and parcel structures

Through the mapping of diverse green and urbanized spaces the project will identify in the beginning where the greening strategy and prototypical developments have to be applied. The research will be undertaken in collaboration with the academic context and includes field research on site if the information is not yet available. The analysis will be based on 5 different scales of intervention.

## MAPPING THE FIELD

**buclia  
scale**

**urban / landscape design  
scale**

**1200 m**

**100 m**

**architecture  
scale**

**texture  
scale**

**1 m**

**12 cm**

**FIG 15. Grid measurements for various scales of intervention**

# LANDSCAPE ACTORS

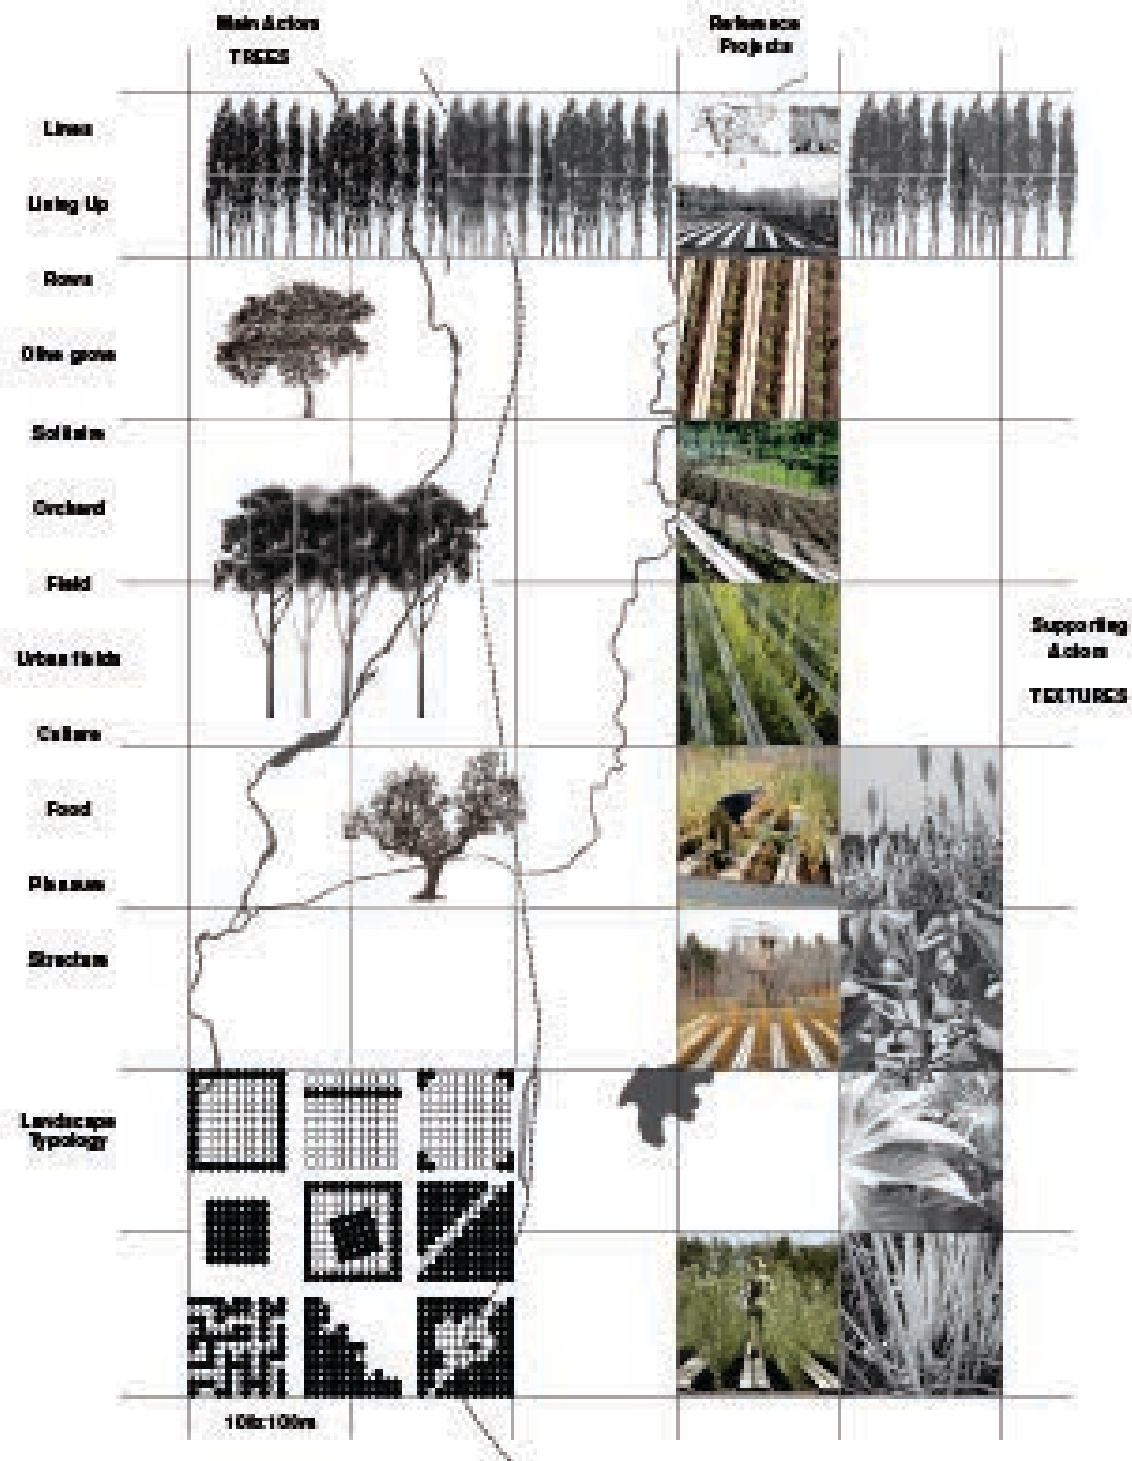

FIG 18. Diagram showing the various ways of using planting actors as a framework, a clearing or the use of lines in the landscape

The planting scheme aims to highlight the site's identity in different scales and places through the introduction of different actors (trees, shrubs, vegetables and climbing plants). The implantation of specific trees provides a tool for territorial measurement and development. They can be used as landmarks along the promenades and stage paths, residual spaces, agriculture & urban landscape.

## PLANTING SCHEME

Plants	Spring	Summer	Autumn	Winter		Typology	Combination
<i>Quercus ilex</i>							
<i>Populus nigra italica</i>							
<i>Eucalyptus camaldulensis</i>							
<i>Olea europaea</i>							
<i>Salix rosmarinifolia</i>							
<i>Rosa caricea</i>							
<i>Arundo donax</i>							
<i>Betula communis</i>							
<i>Daucus carota</i> <i>Allium porrum</i> <i>Cucumis sativus</i> <i>Solanum tuberosum</i> <i>Sorghum halepense</i> <i>Zea mays</i> <i>Triticum aestivum</i> <i>Avena sativa</i> <i>Festuca ovina</i>							
<i>Trifolium alpinum</i> <i>Ragwort</i> <i>Lotus perenne</i> <i>Hemerocallis</i> <i>Trochilodactylus</i> <i>Adiantum</i> <i>Viburnum</i>							

FIG 17.Vocabulary of the planting scheme and its performance during the seasons

An arrangement of trees with lower shrubs and plants will create various atmospheres. This method aims to implant the projects progressively within the sites without adulterate them, but rather amplify their own characteristics. The recognizable and adapted vegetal basis will interweave with the existing landscape as well as encourage and guide agro-tourism within a sustainable agriculture development.

## PLANTING SCHEME

FIG 18.  
Public policies from 'People's State Power' organizing  
collective actions for shaping the landscape.

FIG 19.  
'Voluntary Work' accounts of by the Albanian people  
in the 70s.

FIG 20.  
Painting representing collective production  
of infrastructure and agricultural land.

Working the fields collectively is traditionally anchored in Albania pertaining to the socialist period. What has been framed as 'People's State Power' or 'Voluntary Work' contributed largely to the construction of infrastructure and the modelling of the landscape for terraced agriculture and for drainage systems in the marchlands. By introducing 'Activators' the project proposal refers to the performative quality of collective action for the implementation of the planting schemes through 'Action Gardening'—public happenings that will enhance the identification with the place.

# ACTIVATORS

**FIG 22.** Temporary structures activating the sites during the phase of implementation and creating visibility for the project

## ACTION GARDENING

'Activators' are temporary structures that operate as billboards announcing the planting performance and the installment of public equipments with the contribution of locals, students and other professionals. The 'activators' remain on a site during the gardening activity and will be removed to another location as soon as the initiation phase of the project is finished.

# ACTIVATORS

FIG 21. Introduction of planting patterns as preparation for performing the art of Action Gardening

## ACTION GARDENING

The landscape architects from Atelier Le Balto are drawing from manifold experiences of planting actions that have been realized in various scales. By installing temporary structures gardening can be realized as cooperative events—activators and green houses serve as storage for equipment but also as land marks by creating visibility for the event.

FIG 23. Temporary structures activating the sites during the phase of implementation

# OBSERVATORIES

After activating specific locations with greenery and public equipments observatories will be installed in order to guarantee sustainable development of the area on a long-term basis. Observatories are viewing platforms for the contemplation of the Residual Arcadia of Durana. They can also contain public programs such and they act as civic centers for the negotiaton of local planning initiatives.

## LABORATORIES FOR CIVIC ACTION

**FIG 34. Observatories for the landscape are marking the field serving as viewing towers and centers for civic action**

The observatories are situated along the promenades that cross the longitudinal stretch of the Durana area and they are meeting places for stakeholders, agencies and institutions across local comune structures. As each of the observatories is related to a specific topic they can also extend their function as research centers and laboratories for planning innovation.

## LABORATORIES FOR CIVIC ACTION

**FIG 25. Observatory located on the border between bucolic landscape and the fragmented urban**

With the creation of various promenades various locations will be linked that can serve as test-sites for the future development of the Durana Region. The promenades are enabling an understanding of the site in direction of the cross section and they serve also as connectors for the longitudinal paths: the highway, the secondary road, the railroad track that will be transformed in a green bicycle path and the roads in the hinterlands. They are stimulators for the establishment of new mobility concept and they are scenic pathways that enable to experience the cultural landscape of Residual Arcadia.

## NETWORKS

## 2 THE PROMENADES

FIG 26. Network map showing the intersection of diverse paths, activators, observatories and infrastructural developments

# URBAN PROMENADE

PUBLIC SPACE AND URBAN EXPANSION

PUBLIC SPACE & URBAN EXPANSION

## Education, Public Space & Urban Expansion

### TEST SITE A

Recreation and sports complex

Rehabilitate and adaptate the existing structure for recreation and sport complex.  
Introduce plazas within the community.

### TEST SITE B

Activation of street & plazas, abandoned railroad

Turn the railroad track into a green bicycle path.  
Activate abandoned properties with landscape strategies to revitalize the neighbourhood.

## **PUBLIC SPACE & URBAN EXPANSION**

### TEST SITE C

Bridging and activation of the secondary street and educational spaces

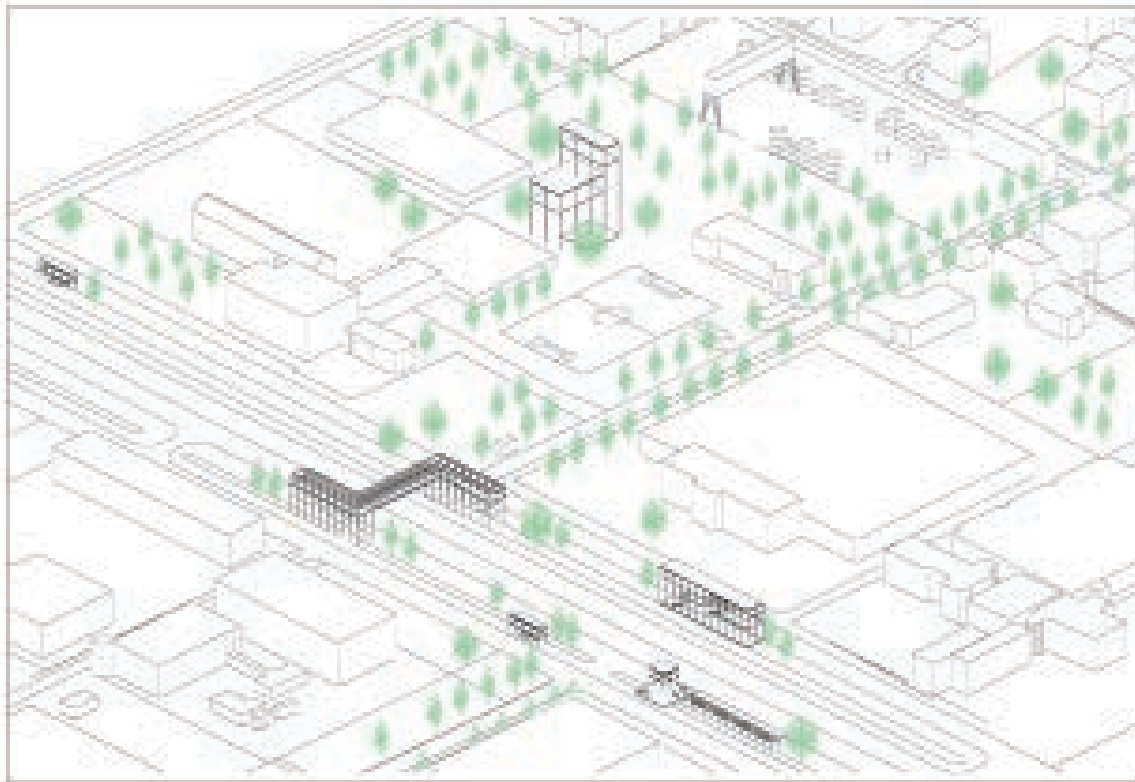

The bridge structure continues the path for bicycles and pedestrians and provides services, such as market, kiosk and bus stop to activate the secondary street.

### TEST SITE D

Urban expansion and re-naturalization

The re-naturalization works as process of negotiation with the community, by providing building permission in exchange of maintaining the front river.

# RURAL PROMENADE

AGRICULTURE

## AGRICULTURE

## Agricultural Production & Recreation

### TEST SITE A

Agricultural site in the hills with restaurant

The restaurant, as part of an agro-tourism corridor, benefits the farmers and the development of the local economy.

### TEST SITE B

Observatory for the landscape with civic center & research laboratory for agriculture

Implement a terraced system to cultivate olive trees as part of a community network.

The specific vocation of the territory allows different green houses surrounding the Kasha Lake.

Create a research laboratory for innovative agriculture.

## AGRICULTURE

### TEST SITE C

Public equipment with green bridge  
& green railroad path

The green treatment on the bridge structure, works as a buffer between the highway and the neighbourhood.  
Different services provide a diversified street scape.

### TEST SITE D

Green houses as activator for agriculture in flat surfaces

Stimulation of agroforestry to create a more diverse and profitable land-use system.  
Prohibit blind walls that restrict the views in favor of interactive property divisions

# PR & COMMUNICATION

In order to mobilize a critical mass for cooperative action performative planning is accompanied by advertisement in the form of posters, brochures and postcards that announce specific events.

The PR material also aims at creating public awareness for civic consciousness and constructive will for establishing Residual Arcadia.
